SUMMARY

DevOps and Cloud Engineer automating hybrid cloud infrastructure for enterprise banking clients, including Intesa Sanpaolo, UniCredit, and BNP Paribas. I turn manual, error prone processes into reliable automation using Ansible playbooks, terraform modules, CI/CD pipelines, and Rundeck jobs, so infrastructure deploys safely, scales consistently, and requires minimal manual intervention.

CORE STACK

AUTOMATION & IAC Ansible, Ansible Automation Platform, Terraform, ARM Templates, Bicep, PagerDuty

CLOUD & PLATFORMS AWS, Azure, GCP, OpenShift, VMware, Kubernetes, Proxmox, Microsoft VMM

CI/CD & DEVSECOPS Azure DevOps, GitHub Actions, SonarQube, NexusIQ, Docker, Trivy

DATABASES SQL Server, PostgreSQL, MySQL, EDB

SCRIPTING & DEV Python, Bash, C#, TypeScript, PowerShell, Java

SYSTEMS RHEL / Linux, Windows Server, Active Directory

EXPERIENCE

DevOps & Cloud Engineer — Sunnyvale Srl

Mar 2023 – Present

Support and primary automation contact for Intesa Sanpaolo's hybrid cloud | SQL Server / MQ automation for UniCredit.

- Migrated non-production SQL Server instances to Developer Edition through a purpose-built automation suite, cutting licensing costs with minimal downtime and no manual re-install errors.
- Mitigated MQ vulnerabilities across the whole estate by building an MQ Client/Server/FTE installation automation that's now the standard rollout method.
- Retired an old Java application that deployed IBM IIB flows and rebuilt it as an Ansible based automation and wrote the documentation and technical and business case that got it approved.
- Built and tested Ansible roles for deploying OpenShift microservices, middleware (JBoss, Apache, WebLogic) and databases (SQL Server, Postgres), using Molecule to keep changes safe to ship.
- Provisioned across Azure and GCP with Terraform, using modules and workspaces.
- Automated RHEL deployment (Ansible + Red Hat Satellite) and Windows Server rollout (SCCM VMM, AD/DNS)
- Managed 2000+ ServiceNow tickets related to infrastructure incidents, troubleshooting issues and coordinating resolutions across teams.

Full-Stack Developer — Capgemini — client: BNP Paribas Asset Management

Nov 2021 – Mar 2023

- Set up CI/CD pipelines with integrated DevSecOps checks (SonarQube quality gates, Sonatype NexusIQ scanning), so releases to Kubernetes on IBM Cloud shipped tested and scanned automatically.
- Containerized legacy on-premises monoliths and rebuilt them as microservices (C#/.NET 6, Angular), packaged as Docker images with Kubernetes manifests for the bank's private cloud.

Junior DevOps Engineer — SCAI Finance

Feb 2021 – Sep 2021

- Replaced manual cloud provisioning with ARM Templates, giving the team repeatable, version-controlled infrastructure instead of one-off setups.
- Built CI/CD pipelines in Azure DevOps for a .NET 5 KPI-monitoring app on Azure App Services, shortening the path from commit to release.

EDUCATION

IT Diploma, Cloud, Big Data & IoT — ITS ICT Foundation, Turin

2019 – 2021 · Final grade 98/100 · Containers, Microservices, SQL/NoSQL, Big Data, CI/CD, IoT

High School Diploma, IT — ITTS C. Grassi, Turin
